

Airack Glass Dryer

Product Information

Airack Glass Dryer

Product Overview & Key Features

To serve the "Perfect Drink" you need a dry glass. The Airack Glass Dryer will dry up to 30 pint glasses in just 4 minutes. The 'usual' method in Bars for drying glasses is with a cloth or towel, or even air drying which can take up to 40 minutes! Using a cloth or towel can be a means of cross-contamination from glass to glass, especially if the towel has been laundered with fabric softener.

Air drying is the correct and ONLY practice that should be followed. The Airack has been developed to greatly reduce the turnaround time from washing to use. The inside of a glass is the part of the glass that takes the longest to dry. The Airack has a specially moulded top cover with specially positioned holes that allow the air to circulate inside the upturned wet glass, this ensures that the inside of the glass is completely dry and what's more, the whole drying process using an Airack takes just 4 minutes! The glasses are ready to use immediately after drying as they are 'cool to the touch'. The Airack does not dry the glasses using warm air, the unit simply draws in the air at room temperature or "ambient" and the air action then cools the glasses as they dry.

The Airack comes with a drain funnel tube, automatic 4 minute timer and a changeable filter.

Dry in Just 4 Minutes

Do away with tea towels and paper towels and simply place the glass basket on the Airack and hit "Start". Just four minutes later, you will have a completely dry glass in which to serve the "Perfect Drink". Glasses are cool to the touch and ready for immediate use, as the air action cools glasses as they are dried.

Fully Integrated

The Airack comes as standard with an automatic push button timer, you simply hit the timer and 4 minutes later the Airack will switch itself off and the glasses will be dry. The Airack also comes with a drain funnel tube which is attached to the unit and drains away any excess droplets of water whilst the glasses are being dried. The Airack has 1 changeable filter, which can be easily removed and replaced; this is recommended to be replaced at least every 6 – 8 months.

Easy To Install & Use

The Airack Glass Dryer is simple to install and use. It plugs into a standard 13amp plug socket and has one control button... "Start". Simply remove the basket from the glass washer machine, place on the Airack and push "Start". Wait 4 minutes and you will have perfectly dry glasses.

Technical Specification

Airack 40

CE Marked:	Yes	Yes	Yes

Installation Requirements

Heading	Information
Siting	<p>Positioning should be on a sound level surface with adequate clearance for servicing.</p> <p>The Airack can be mounted onto a purpose made basket stand providing optimum working height. It is recommended that if the Airack is mounted on a stand then the unit should be placed within close proximity of the glass washer and no further than one metre from an electrical socket.</p>
Electrical	<p>The Airack is supplied with a 13amp plug and can be plugged into a 3 pin plug socket. The socket must be positioned within one metre of the Airack and be easily accessible.</p>
Drain	<p>A rubber outlet pipe is supplied with the Airack. This is fitted to the unit to remove any excess water build-up resulting from the draining/drying process. The outlet pipe can be placed into an up-stand or receptacle within 1 metre of the unit.</p>
